

Ecole Supérieure d'Agricultures, France

ESA is an institute of higher education for life sciences in France. it offers a wide range of study programs from Bacculaureate level to PhD, as well as engineering degrees, with full-time, work-study and also distance learning.

ESA's international dimension is reflected by its Erasmus+ recognised masters' programmes, the 250 international students hosted each year of 35 different nationalities and its visiting lecturers.

ESA hosts the GRAPPE Research Unit, which focuses on the multi-criteria assessment of sustainable food systems quality, combining physiochemical measurements with a sensorial or hedonic evaluation. In addition, and in line with the logic of sustainable food systems, the team develops innovative methods and new indicators to evaluate both the quality of the products and the environmental impacts associated with their production and processing.

OENOVITI International allows the meeting of different international partners to create a link between some of them.

It provides scientific information on various wine-related topics, and interesting discussions. We hope it will also lead to common scientific projects.
