

University of Turin, Italy

The University of Turin is today one of the largest Italian Universities, open to international research and training. It carries out scientific research and organizes courses in all disciplines, except for Engineering and Architecture. It is an integral part of the community, acting for reviving urban and suburban areas, promoting cultural interaction, social integration and development, encouraging dialogue and insight into current realities.

The University of Turin virtually covers every field of knowledge; its Medical Diagnostic, Biosensoristics and Nanotechnologies research centers are amongst the best ones in Italy. Some of the degree courses offered are unique in Italy, such as Military Strategy, Biotechnology, Sport Sciences, Restoration and Conservation (in Venaria). The University of Turin has a remarkable research tradition in traditional subjects such as history, philosophy, law, economics and medicine but it is currently branching out into important modern sectors, such as food science, social politics, IT, performing arts and communication sciences.

UNIVERSITA
DEGLI STUDI
DI TORINO

Joining OENOVITI International give us the opportunity to meet actors in the field of wine and vine, to create projects and meetings in collaboration with researchers from all over the world, and to share our research.

Oenobio Summer School, Turin, 2021

Prof. Vittorino Novello

Mr Vittorino Novello is a professor at the University of Turin. He teaches viticulture and innovations in viticulture systems. Regarding scientific research, he is currently working on the use of plastic covering to advance or delay grape ripening.

"Joining Oenoviti International is a good way to know what is happening in our sector, the network can bring many benefits. We are working on various projects within the network, in particular the RiseWise project, which consists of exchanging researchers between two organizations from different countries. At the University of Turin, we organize exchanges with Argentina and South Africa. We are also working on the Oenobio project. We would like to combine the Oenobio master and the Vinifera master into a single entity, a new big consortium, to make it a recognized institution in Europe."
